

Vancouver Coastal Health works with local governments and other agencies to monitor beach water quality throughout the swimming season. Canadian Recreational Guidelines recommend a geometric mean of less than 200 E.coli/100ml or a single sample less than 235 E.coli/100ml. When these numbers are exceeded, a Medical Health Officer will make a health risk assessment usually resulting in the posting of an advisory notice or additional sampling in the case of a single high count.

Area	Beach	Geometric Mean (Ecoli MPN/100mL)	Calculated On
